

How do you design your Swittons?

Want automation and efficiency?
Try Swittons.

Think of your **locations** where you have high activity and resource needs. This is where you can place a Switton, such as:

1

- Laboratory bench
- Stockroom
- Warehouse
- Equipment supplies
- Office supplies
- Remote workers
- Food service
- Customer interface

Think of **4 manual tasks** for that location, where you usually need to “inform” a person or system for the task to be completed, such as

2

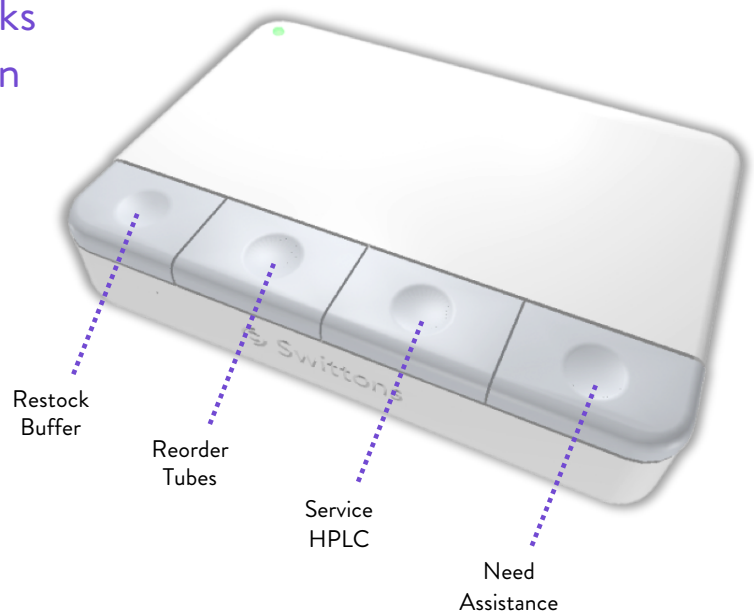

- Restocking supplies
- Requesting a service
- Emailing a Manager
- Ordering inventory
- Requesting a call or meeting
- Requesting equipment calibration
- Open ticket in Servicenow
- Connect to scheduling software

3

Select your Tasks for each Switton

Location: QC Lab Bench

- Restock Buffer
- Reorder Tubes
- Service HPLC
- Need Assistance

Select your Messaging for each Task

Send a Text

Start Video Meeting

Trigger a Call

Integrate with a Computer System

4

5

Design custom branding, based on your Marketing goals and selected tasks.

Voila!

Swittons is an enterprise solution consisting of proprietary P360 hardware and software, deployable into unlimited use cases to gain unlimited efficiencies through automation of basic workstreams that are usually (and painfully) manual. Swittons automates workstreams by providing fast notifications, triggering phone and video calls, and integrating with your existing e-systems. Better everything.
